Jun Ishibashi

Full Stack Software Engineer

Gold Coast, QLD, Australia | contact@junwebdesign.com

junwebdesign.com | linkedin.com/in/jun-ishibashi | github.com/jun-ishibashi

Professional Summary

Full stack software engineer specialising in React, TypeScript, Laravel and MySQL. Delivered multilingual HR-tech products at Leverages and led delivery and code review within a three-person development team. Currently develops Laravel features, implements security upgrades and maintains applications at Sprint Digital. Experience spans API and database design, production releases and incident response.

Technical Skills

Frontend: React, TypeScript, JavaScript, Next.js, HTML, CSS, Tailwind CSS

Backend and data: PHP, Laravel, REST APIs, MySQL, Supabase, GraphQL/Apollo Client

Cloud and delivery: AWS, Docker, Vercel, Git, GitHub, CI/CD, production monitoring

Testing: Playwright, Vitest, React Testing Library, unit and end-to-end testing

Professional Experience

Sprint Digital

Web Developer (Contract) | Sep 2026 - Present | Brisbane, Australia

- Develop new features in Laravel applications and maintain existing functionality.
- Implement security-related upgrades and support ongoing application maintenance and operations.

Self-employed

Freelance Web Developer | Aug 2025 - Present | Gold Coast, Australia

- Deliver websites and web applications for clients in Japan and Australia, from requirements and user flows to implementation, release and handover.
- Develop responsive interfaces and API integrations using React, TypeScript, Next.js and Supabase; implement SEO and GA4 tracking for client websites.

Leverages Co., Ltd.

Web Developer / Full Stack Developer | Feb 2022 - Jul 2025 | Tokyo, Japan

- Delivered React/TypeScript interfaces and Laravel features for HR-tech products supporting 11 languages, including job applications, recruitment workflows and CMS/admin tools.
- Led a three-person development team through scrum delivery, progress reporting and code reviews, and supported React adoption across applicant and admin workflows.
- Designed MySQL schemas and Laravel REST APIs, integrated Salesforce APIs and worked with GraphQL/Apollo Client data flows.
- Managed production releases and rollback planning; investigated incidents using CloudWatch and ALB logs and supported WAF-based traffic protection.
- Worked with marketing on application forms, calls to action, SEO and Core Web Vitals; implemented GA/dataLayer tracking and used Microsoft Clarity to investigate user journeys.

Jun Ishibashi

Selected Projects

SPA JAPAN

Booking platform MVP | Full stack development

Next.js, TypeScript, Supabase, Stripe Connect, Resend, Vercel

- Built booking workflows for customers, service providers and administrators, covering service discovery, checkout and booking management.
- Implemented Stripe Connect payment capture and refund flows, transactional notifications and owner/admin consoles.
- Designed Supabase row-level security, booking concurrency safeguards and reconciliation jobs to support controlled access and consistent booking and payment records.

Wahori Mate

Working holiday support platform | Independent project | wahorimate.com

Next.js, TypeScript, Supabase, Tailwind CSS

- Built and launched a Japanese-first platform with community features, guides, checklists, user profiles and saved content.
- Designed authentication and Supabase row-level security for user data, alongside reporting and moderation workflows, as the sole developer.

Client Websites

Web development for businesses in Japan and Australia

- Delivered Australian small-business websites and a Japanese healthcare landing page, translating business requirements into responsive pages and clear enquiry journeys.
- Prepared staged releases and handover documentation, with SEO foundations and analytics appropriate to each website.
